**FOR IMMEDIATE RELEASE**

RCI Technologies, Inc.  
San Dimas, California – October 15, 2004

## **MAINTAIN OPTIMAL FUEL QUALITY**

RCI Technologies is pleased to announce a new model in its line of fuel purification products. Made in the USA, the **FRS-660** Fuel Recirculating System is a fully automatic programmable maintenance system. Packaged as a pre-engineered integrated system to accommodate various applications with fuel flows from 2 gpm up to 150 gpm. Single and multiple tank applications are specifically designed per the customer's specifications. Utilizing RCI Technologies' unique fuel purifiers, the system contains no filters, elements or cartridges to clean, change or replace, a *benefit* to all users.

The **FRS-660** is designed for use with fuel oil (class II or class III combustible liquids having a flash point of 100°F or higher). The system is fully enclosed and suitable for wall or pad mounting. All devices, wiring and plumbing, are safeguarded within a NEMA-3R rated weatherproof enclosure, isolated compartments are provided for mechanical and electrical components.

Routine circulation with RCI's **FRS-660** System will remove over 99% of all free water and up to 98% of normal and natural contaminants found in all diesel fuels, including sludge and algae. In addition to extending filter life and improving engine performance, combustibility increases and also allows the end user to reclaim dirty fuel. RCI Technologies Fuel Purifiers contain no filters, no moving parts, and no elements or cartridges to clean or replace.

RCI Technologies **FRS-660** Fuel Recirculating System includes standard features with up grades available. Our complete product line can be viewed from our website: [www.rcipurifier.com](http://www.rcipurifier.com) or call us at 1-800-868-2088 to request product information.

RCI Technologies is "**THE PERMANENT SOLUTION**" for protecting your investment.
