

We recently remodeled our fuel and service facility. After researching several possibilities, our engineers specified the RCI Technologies' fuel purifier, model FP 1500-P on each of our fuel islands. Each of these RCI units is capable of handling fuel flows of up to 90 gallons per minute and adds no restrictions or backpressure to the system.

The RCI slogan "*The Permanent Solution*" is correct, we have no more filters to change and are therefore saving a considerable amount of time and labor. We no longer dispose of two or three quarts of fuel with each filter change so our hazardous waste disposal cost has dramatically reduced. About ninety five percent of what we throw away is now contaminated fuel compared to a normal filter change where you throw away ninety five percent clear fuel in order to remove the five percent contamination.

All of this has occurred with no down side. We continue to have no fuel problems and are sure the cleaner fuel will result in overall lower engine maintenance cost.

Incidentally, RCI purifiers have been specified on all pump islands in our new North Long Beach facility, which is currently being designed.

# RCI TECHNOLOGIES FUEL PURIFIERS

## FP 1500-P

## FP 800

**RCI PURIFIERS SPECIFIED  
BY ENGINEERS...**

**NO RESTRICTIONS OR BACK  
PRESSURE...**

**CONSIDERABLE TIME AND  
LABOR SAVINGS...**

**HAZARDOUS WASTE COSTS  
DRAMATICALLY REDUCED...**
