

# RCI TECHNOLOGIES UNIVERSAL FUEL PURIFIER

## FP 800

We trust you have obtained a copy of the September edition of "Sea" magazine. Besides the cover, there is a three-page write-up on "Artemis" which includes a reference to RCI Technologies fuel purifiers.

Although the article was a little confusing in its description (referring to the Winns filters as separating water from the fuel, instead of the RCI's) basically, both systems are capable of doing so, but the RCI centrifuge filters are placed right off the outlet side of the fuel tanks, so they are our first line of defense.

In cruising Mexico last season, when fueling, not once did we have to revert to using our "Baja Filter", and considering we have wasted our money by even purchasing one.

The RCI purifier not only filtered out all of the impurities (and on our daily checks, there was plenty of evidence), but also negated our using any expensive additives; such as "Bio-bore", to eliminate algae growth, when we left our vessel unattended in the marinas for weeks at a time. The fuel reaching our very sensitive M.A.N. was clear, and we have never had fuel blockage problems or dirty injectors.

Before installing the RCI units, we had previously considered purchasing an Alfa-Laval fuel separator, but the initial cost (at over \$7,000) was very high, and space constraints; together with the necessity of a day-tank for running, were insurmountable obstacles. The RCI units are so inconspicuous; they blend in and look a part of the original fuel system. Great work and congratulations to the inventor! I am glad we discovered your product – you should do more advertising to bring it to the boating community's attention.

## OFFSHORE 62' FLUSH DECK MOTORYACHT...

### "ARTEMIS"

### GREAT WORK...

## CONGRATULATIONS TO THE INVENTOR...
