

RCI TECHNOLOGIES FUEL PURIFIER

DRESSER MODEL 200 CRAWLER

**FP 80
FP 800**

**DISPENSER PUMPS DOING
FINE...NO PROBLEMS**

**WE WERE CHANGING
PRIMARY FILTERS AT
LEAST ONCE A DAY...**

**IMPRESSED BY THE
AMOUNT OF WATER AND
CONTAMINATES THE
PURIFIER RETAINED**

**OUR EMERGENCY
FILTER CHANGES
HAVE STOPPED**

We purchased two **FP 800** units for our dispenser pumps and one **FP 80** for a loader that was giving us problems.

The *dispenser pump units are doing fine*, we purge on a routine basis and have had *no problems*. The loader, a Dresser model 200 crawler, powered by a Cummins engine is the real story. This unit had been out on rental for some time and we were really having a lot of problems. We didn't know the cause, but we did know we needed help. *We were forced to change the primary fuel filter once a day, sometimes twice.*

Since we have installed the RCI fuel purifier, we have not had to do any emergency filter changes. We just completed a normal service on the loader, we purged the purifier and was really surprised and *impressed by the amount of water and contaminates the RCI purifier retained.*

This particular loader is usually used on steep hillside projects and the fuel in the tank usually gets sloshed around quite a bit. After seeing the contaminates retained by the RCI Technologies fuel purifier, we now know it has saved us many emergency filter changes.
