

**V.A. Medical Center
West Los Angeles, Ca.**

A little over a month ago we had our tank cleaned. The company hired to do the cleaning was concerned about the amount of water contained in our fuel. They suggested we contact the RCI people.

Our tank is a vertically mounted 6,000-gallon, aboveground tank. It is located on the southeast side of our building, right in the morning sun. Our personnel installed and plumbed a platform mounted FP 1500-P unit so that we could circulate fuel from our tank through the RCI purifier and back into the tank, as well as making sure all fuel we were actually using went through the RCI unit before it went to our boilers.

After installing the RCI unit, we used a gravity feed line to make sure we removed all the air from the new installation as well as the RCI purifier. Once we were sure all the air had been purged we turned on our circulating pump, which moves at least 40 gallons of fuel per minute. Within the first twenty minutes, the RCI purifier removed 2½ gallons of water from our fuel. Remember, this was less than two months after we paid \$1,600.00 to have our tank cleaned. Water has been a regular problem for us, especially since we began using Amber 363 Lonox oil. It looks like the RCI Technologies purifier just took care of that.

RCI TECHNOLOGIES FUEL PURIFIER

FP 1500-P

**WITHIN THE FIRST
20 MINUTES
THE RCI PURIFIER
REMOVED
2 ½ GALLONS OF
WATER...**

**WE JUST PAID TO HAVE
OUR TANKS CLEANED...**
