Mr. Greg Hafer
Hafer Petroleum Equipment

Subject: Fueling Technologies and RCI Purifiers

Dear Greg:

I'd like to introduce you to a couple of products that are revolutionizing the petroleum market. **FTI's AST mass measurement gauge** utilizes the most accurate technology in the industry for bulk petroleum, chemical and even propane ASTs. Your customers can now enjoy accuracy over 99.5% on tanks as large as 1.5M gallons, and the patented wireless technology makes huge installation costs a thing of the past!

Carrying the FTI product is allowing PEI distributors the ability to open up entirely new profit centers for their businesses. The ability to remotely monitor propane tanks is providing FTI distributors the tools to target an entirely new market, which, until now has been stuck "in the dark ages" in terms of inventory monitoring. The benefits of accurate inventory measurements in bulk storage tanks (whether petroleum, chemical or propane) are vast. Please look for the FTI booth at both the NPGA show in Atlanta as well as AREE in Atlantic City.

The RCI Technologies purifier is a unique product utilizing a three-stage purification process using two well-known fuel separation principles, centrifugal and coalescence. By using these two principles, water and other contaminants are separated from the fuel. This eliminates fuel filter clogging, related breakdowns, down time, and frequent filter replacements. Available in a wide variety of sizes and flow rates, as well as portable and automatic circulating systems, the RCI advantage is clear – LESS CLOGGING and NO FILTER REPLACEMENT! It really is the PERMANENT SOLUTION!

I will contact you the next time I'm in your area to go over these exciting opportunities. In the meantime, if you are interested in learning more, please feel free to contact me.

Best Regards,

Patrick Dapolito
OnCall Technologies

Proudly representing these and other fine products in the petroleum, petro-chemical and propane industries
